

Hard-wearing safety shoes developed
FOR ACTIVE WORK
where high demands comes first.

A lace-up low safety shoe developed for active work where high demands are placed on comfort, shock absorption and the highest level of heel protection. In order to create extra good ventilation the outer material in nubuck leather is fitted with textile panels. The nail penetration protection and toecap make the shoe perfect for construction sites, workshops but also different industries as the sole is resistant to many chemicals. As the shoe is metal-free it is also suitable for use in nuclear powerplants, airports and similar environments. Apart from the safety factor we have also put emphasis on user comfort.

SAFETY SHOES L.BRADOR 760

QUALITIES AND USER BENEFITS

- Composite toecap and soft penetration protection for a fully metal-free shoe.
- Uppers in heavy and versatile nubuck leather with textile panels for a cool feel.
- Extra reinforced with PU protection on the toecap for increased life.
- Lining in airy mesh for good breathability.
- Durable microfiber inside the heel for best durability.
- Internal reinforcement material at the heel protects and gives support, formed after the wearer.
- Removable antistatic insulating inner sole, in microfibre with three different densities of EVA material, for good absorption of the entire foot.
- The inner sole is built up in the arch for good comfort and to reduce the risk for heel spurs.
- The inner sole is perforated to keep the foot dry and cool.

- The outer sole in TPU gives good anti-slip protection and makes the shoe suitable for work in varying temperatures.
- Mid-sole in PU with a different density for good shock absorption and stability. Shock absorber in the heel dampens the impact and returns the energy on the up-motion especially when the foot is put down hard.
- Generous fit.

COMPLIES WITH

EN ISO 20345. Category: S1, P, SRC.

Hard-wearing safety shoe developed for active work where high demands are placed on comfort, shock absorption and the highest class of anti-slip protection. As the shoe is manufactured in full grain leather it protects against the tough outdoor conditions. The penetration protection and toecaps make the shoe a perfect choice for construction sites, workshops and even different industries as the sole is resistant to many chemicals. Apart from the protection factor we have also emphasised the need for user comfort.

SAFETY SHOES L.BRADOR 761
